Rocky Flats Office**memorandum**

DATE: FEB 16 1994

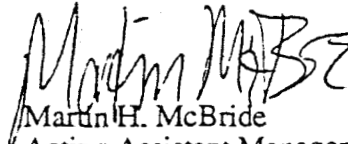

REPLY TO:
ATTN OF: ER:DFG:01423

SUBJECT: Removal of Piping and Sprinkler Heads from Operable Unit No. 11 (West Spray Field)

TO: Susan Stiger, Associate General Manager
Environmental Restoration Management
EG&G Rocky Flats, Inc.

In our efforts to clean up the buffer zone and provide an enhanced appearance to the plant, DOE is requesting EG&G to remove the sprinkler heads and associated piping from the Buffer Zone (in the area formerly known as the West Spray Field). It is anticipated that this work will require an inventory of the piping, a radiation screen, possible decontamination, and interim storage. Please provide this office with an informal plan, a schedule, and the costs associated with this removal and storage. Please identify any additional barriers that may prohibit the hasty removal of the pipes. We would like to have this material removed from the area prior to the startup of Operable Unit No. 11 field activities, which will commence in late February.

Please provide the requested information and schedules to us for review by February 28, 1994. Your cooperation in this expedited action is appreciated. If you have any questions or need more information, please contact Dave George at extension 5669.

Martin H. McBride
Acting Assistant Manager for
Environmental Restoration
